Project Lifesaver relies on proven radio technology and a specially trained search and rescue team. Clients that are enrolled in the Project Lifesaver program wear a personalized wristband that emits a tracking signal. When caregivers notify the local Project Lifesaver agency that a client is missing, a search and rescue team responds to the area in which the client was last seen and begins searching with a mobile locator tracking system. Search times have been reduced from hours and days to minutes. There have been 1,665 national searches to date with a 100% recovery rate and zero fatalities. Recovery times average less than 30 minutes.

By forming partnerships with local law enforcement and public safety organizations, Project Lifesaver deploys specially trained teams with the most reliable technology available to quickly locate and return wandering adults and children to their families and caregivers.
